## PBS GROUP presents the future of high-tech Czech engineering at IDET

**Praha / Brno – The global PBS GROUP will present itself at the International Defence and Security Technology Fair IDET, which will take place from 28 to 30 May 2025 at the Brno Exhibition Centre. PBS GROUP will present its jet aircraft engines, which are manufactured in Velká Bíteš, at the fair, which is aimed at strengthening Czech exports. With its high-tech products, PBS GROUP is creating a success story for Czech engineering, giving a future to hundreds of its employees and attracting others to the opportunity to participate in the production and development of future technologies.**

PBS GROUP is a synonym for high-tech development and production of jet aircraft engines, auxiliary power units, turbines and other components for the defence industry. It demonstrates not only the technological maturity and quality of its products, but also its successful expansion into global markets. Due to the growing demand, especially in the aerospace and defence industry, the Group is multiplying its production capacity. The production plant in Velké Bíteš near Brno has thus become one of the pillars of the Czech high-tech industry and an important point on the map of not only Czech but also global engineering production.

"Our export results are indeed record-breaking and demand for our engines continues to grow. This year, we are making investments approaching CZK 1 billion, which will help us to increase production many times over. For example, we are building a brand new, already second, division of aerospace production. We are also expanding our development capacities. All of this means a future, stability and security for hundreds of our employees and also new jobs," says Milan Macholán, CEO of PBS Velká Bíteš.

Thanks to its excellent track record, PBS GROUP offers its employees the opportunity to participate in the development of cutting-edge technologies that are driving innovation in aviation, transport and defence in many countries around the world. It offers them very good financial compensation, but also superior benefits and a modern and motivating environment. In the last year alone, the ranks of employees in Velká Bíteš have grown from 600 to 700 people.

"People are key to further strengthening production and export performance. We are particularly looking for technical and production positions. We promise that some candidates might be interested in coming to work for us, especially since the automotive sector is experiencing stagnation. In Velká Bíteš, we are looking for various positions in production, as well as, for example, a specialist in certification and legislation in the field of aviation, a buyer or managerial positions within the design, development, testing and production of engines,"

adds Milan Macholán. The Group is looking for engineers who are involved in the construction of aeronautical equipment for its Brno office, as well as for control systems specialists for its headquarters in Prague.

PBS GROUP has also achieved international expansion by opening an aircraft engine plant in the United States in April and is planning another major investment there.

**About us:**

PBS GROUP, the manufacturer of aerospace technology, is synonymous with innovation in the field of high-precision engineering. It is a renowned manufacturer of jet engines. With its main production headquarters in Velka Bites and growing production capacities in the USA and India, the company has become a major global player in the field of defence and civil technology. PBS GROUP has long been involved in the development of advanced aerospace technologies that support the defence projects of NATO and its allies, as well as in civil aviation.
